
start 0, step 50, candidate 5; camera (-15, 12, -65) outside the ROI
depth along the ray: observed 2.2, blocked 3.2, predicted 33.4, true 2.7
start 4, step 20, candidate 6; camera (5, 28, 65) outside the ROI
depth along the ray: observed 40.2, blocked 41.0, predicted 46.4, true 40.6
start 1, step 55, candidate 7; camera (15, 28, 65) outside the ROI
depth along the ray: observed 46.2, blocked 46.8, predicted 51.5, true 46.9
height y (runtime units)
horizontal distance from the camera along the ray
simulator mesh in this vertical plane (offline)
depth points the agent has observed (within 0.5 of the plane)
ROI box = coverage target region = P1 domain
candidate camera
first observed point on the ray
D-v2 blocking depth (whole bundle blocked)
predicted first hit (removed)
true first surface (offline)
