Scenes used: preliminary subset (0 of 14 scenes complete in all four cells). Same frozen V3-T0 checkpoint, simulator, candidates, noise keys, value_cov (eps 1 m, 1 m cells), lambda 0 in every row; only K and the planning depth change.

Depth 1 = one-step value_cov averaged over the K samples (not the DistP1 score). K = 1 uses noise map 0 of the K = 4 set. Effects with scene-bootstrap CIs: table3_effects.csv.
